The average duration of life of those kept entire upon leaves was over 30 days. In another test 310 weevils were placed upon leaves alone during October, 1904. Seventy-four per cent of these died in less than 10 days, while 7.4 per cent lived for an average of over 38.3 days, when they were placed in hibernation. In a check experiment on 42 weevils, 43 per cent died in less than 5 days, and 24 per cent lived for an average of 36 days. As in the preceding experiment, a large proportion died within a few days. Among those surviving the first critical period, 31 per cent of those on foliage lived to an average age of 38.3 days, and 42 per cent of those on squares lived to an average age of 35.9 days.
